

## Wonderland

### Technical Rider:

The show must be set up on a clear space of 10x10 meters. The syntetic fabric pool has a 7 mts Ø and it needs to be place on a flat surface.

The set up for the show takes 1:00 hour.  
The break off for the show is 1:30 hour.

An 220v electricity supply must be arranged not further than 3 mts from the pool.

The show can be played half or full circle.(180°/360°).

There must be a timelapse of 1 hour between the end of a presentation and the start of the next one. After the end of every show a very large amount of balls must be collected and sacked again for the next show, with the help of a volunteer this process can be reduced to the half of the usual time.

There must be a chance to drive with the car (minivan) till the performing area. Alternative transportation of the materials to the performing space can be arranged with the help of volunteers.

It's not possible to play the show under the rain, cause the water remain inside of the pool and produces damages on some of the equipment.

The show is site specific, it means that is not possible to relocate for another performance, however, there are ways to pull it back in case that the performance area must be shared with another artists/performances.

The show is not suitable for a stage!!!
